Google Pay

*Fiserv (formerly CardConnect)

Google Pay gives your supporters an alternative payment option. This provides them the convenience of more options to donate how they want: Credit/Debit, PayPal, Google Pay and Apple Pay.

If you have a **Fiserv** payment processor, then you can enable Google Pay on all activities. If you have a payment form (such as Donation or Ticket Sales) created before the introduction of Google Pay in your account, you can also enable the switch within the form itself.

> **NOTE:** Google Pay does not currently support recurring gifts; only one-time donations are available.

Form Settings for Google Pay

To enable (or disable) Google Pay with an Activity, open the Activity.

Click on the **Online Forms** category on the left and choose the form if you have more than one form.

Open the **Payment Information** section.

Click the switch to **Enable Google Pay as a payment method**.

Notes and Restrictions

- **Fiserv:** Google Pay will *only* work with accounts that are using Fiserv for credit card processing. If you are using a different payment processor, Google Pay will not be an option.
    - If you are interested in adding Google Pay and do not have a Fiserv merchant account, reach out to your GiveSmart representative.

- **Embedded forms:** The Google Pay option will *not* appear on embedded forms. This is a Google Pay security policy which restricts the use of Google Pay within an iFrame embed.

> **Note:** To successfully pay with Google Pay, donors must be signed in to a Google account on their device, which has Google Pay configured.
