How do I remove the default donation box on my form?

Perhaps you've added custom form elements to your form such as Items or a Drop Down, or, you have a Ticketing form where you'd like to remove the additional donation option.

You've found that hiding the Suggested Amounts section does not automatically hide the **Default Donation box** on your form (below). This article explains how to remove this donation box.

To hide this default donation box, add a **Calculated form element** which allows you to tell the form how to calculate the final amount at the bottom.

> A **calculated element** effectively replaces/overrides the default donation box and suggested amounts.

When configuring your calculation and building your calculated equation, be sure to select the checkbox for "*Make this calculation the final donation amount*" to ensure that the default donation box will be removed, and save your changes.
